

IT INCIDENT REPORT SAMPLE

Incident ID	INC-2026-001
Date	23 May 2026
Reported By	IT Support Technician
Department	Technical Support
Incident Type	Disk Space / Performance Issue
Priority Level	Medium
Status	Resolved

Incident Description

The user reported that the Windows computer was running slowly and displaying low storage warnings on the C Drive.

Root Cause Analysis

The issue was caused by excessive temporary files, cached system data, and unused applications consuming available storage space.

Troubleshooting Steps Performed

1. Opened Control Panel.
2. Accessed Programs and Features.
3. Removed unused applications.
4. Opened Command Prompt as Administrator.
5. Executed temporary file cleanup command.
6. Verified increase in available storage space.

Command Used

```
del /q /f /s %temp%\*
```

Resolution

Temporary files were successfully removed and available storage increased significantly. System performance improved after maintenance.

Recommendations

Perform monthly disk cleanup maintenance and uninstall unused software regularly to maintain optimal computer performance.
