

IT SUPPORT PORTFOLIO

Windows PC Freeze Troubleshooting & System Repair

Objective

This document demonstrates practical IT support troubleshooting skills used to resolve Windows PC freezing and performance issues using Windows Task Manager and System File Checker (SFC).

Troubleshooting Procedures

Step	Action Performed	Purpose
1	Opened Task Manager using Ctrl + Shift + Esc	Access system processes and services
2	Located Windows Explorer process	Identify frozen desktop process
3	Restarted Windows Explorer	Refresh desktop and taskbar
4	Opened Command Prompt as Administrator	Access advanced repair tools
5	Executed SFC /scannow command	Scan and repair corrupted system files
6	Verified scan completion	Confirm system integrity and repair status

System Repair Command

Command Used:

SFC /scannow

Skills Demonstrated

- Windows Troubleshooting
- IT Support Fundamentals
- System Repair & Maintenance
- Task Manager Operations
- Command Line Administration
- End-User Technical Support

Results

The Windows PC freezing issue was resolved by restarting Windows Explorer and scanning system files using the System File Checker utility. System performance and responsiveness improved successfully.

Portfolio Notes

This portfolio document showcases practical IT support knowledge in diagnosing and resolving common Windows operating system performance and freezing problems.
